

Education

MS | Computer Science

University of Freiburg | 2017

- Research: Computer Vision, Machine Learning
- Advisor: Thomas Brox
- Collaborators: Wojciech Samek
- GPA: 3.75 (US) - 1.6 (German)

BS | Computer & Communications Engineering

Alexandria University | 2014

- CS GPA: 3.48
- Concentration in AI/Computer Vision

Skills

Languages

Proficient

Python • C • C++

Experienced

CUDA • Java • Matlab • C#

Machine Learning

Frameworks

Pytorch • Keras • Caffe

Tensorflow • Torch7

Algorithms

Attention • Autoencoders

GANs • CNNs • RNNs

Tools

Platforms

Docker • AWS • GCP

HPC

Slurm • SGE • TORQUE

OS

Linux • Mac • Windows

IDEs

Vim • Jupyter • VSCode

Web

JavaScript • Jekyll • PHP

Languages

Fluent

English • Arabic

Basic

German • French

Experience

Fraunhofer HHI | Machine Learning Researcher

Nov. 2017 - Present

- Developing adversarial attacks for multi-modal & NLP tasks.
- Implemented parametric compression methods for the MPEG call for neural network compression.
- Investigated methods for medical visual question answering.
- Investigated methods to interpret multi-modal deep learning models.
- Conducted pilot ML experiments on the upcoming MPEG video standard.
- Co-managed (14) GPU clusters for the entire ML group.

Fraunhofer HHI | Machine Learning Research Assistant

Feb. 2017 - Oct. 2017

- Developed a novel attention mechanism for multi-modal tasks (Visual Question Answering).
- Exhibited at CEBIT18 & Tagesspiegel 2018. Will be exhibited at MS Wissenschaft 2019 & ScienceStation 2019.
- Preprint: <https://arxiv.org/abs/1802.00209>. Presented at CVPR18 workshop.
- Demo: <https://lrpserver.hhi.fraunhofer.de/visual-question-answering>.

SRTA City - Informatics Institute | Research Assistant

Oct. 2014 - Mar. 2015

- Designed and coded a novel GPU FFT-based convolutional neural network framework, resulting in superior performance compared to other frameworks (Caffe, Torch7, Theano) for large filters.
- Developed a custom GPU-accelerated real-time object tracking & navigation system performing 13x faster than an equivalent OpenCV implementation.

Alexandria Uni. Computer Vision Lab | Student Researcher

Aug. 2013 - Oct. 2013

- Extended traditional CV algorithms for human action classification.
- Mentored students to understand feature extraction methods, coding schemes, and classification models.

IRON Labs | Full Stack Software Engineer

Sep. 2012, Nov. 2013

- Co-designed and developed a clinic management software from the ground up, including requirement analysis, software design, implementation, and testing.
- Created and executed software test plans for an enterprise resource planning software (ERP).
- Developed a protocol to facilitate communication between software developers and QA testers.
- Added new features to the warehouse and finance modules of the ERP software.

Al Manbat Computer Inc. | Software Developer intern

Jun. 2012 - Aug. 2012

- Increased market share of the nationally leading hospital management system by Oracle database entities, SQL queries, and interface from Arabic to English.
